### CHEMICAL PLUME SOFTWARE TRAINING

This class looks at unintentional and/or intentional atmospheric chemical releases and allows participants to get hands-on experience with computer modeling software. [CAMEO, MARPLOT, and ALOHA]

Beginners, as well as those with advanced computer skills, should have no problems with this course. This course goes at a slower pace with lots of hands-on time on the computer. It is a very interactive course with plenty of time for discussion. At course completion participants will be able to use the software in preplanning for releases that may affect their workplaces and/or their communities. The most effective way of reducing the likelihood of workplace emergencies or the severity of an incident, that could not only impact productivity but your relationship with your community, is to have a well trained workforce.

For decades the ICWUC Center for Worker Health and Safety Education has helped employers and their employees create safe and healthy workplace environments. By using proven adult participatory training techniques our customized training program can establish a culture of working together.

Contact the ICWUC CWHSE if you are interested in **Chemical Plume Software Training**, or to discuss other workplace health and safety training.
