

I got this email from one of our members who participated in the WWW class. He shared your impact on him and his local and gave you kudos for your great training! I know it's hard work, so it's good to know you're making a difference.

Thanks,
Milly

Good afternoon, Everyone,

I wanted to let you know that the Chemical Emergency Response class was absolutely amazing. My hat goes off to Justin Tristan and Joel Alvarez. They both were inspiring and did an awesome job providing information to bring back and share with our Local. Hopefully, there will be more training opportunities for our health and safety committee team members to take advantage.

After returning to work this week, I was asked to go into our Suitland HQ location. On 9/27, I walked into an ongoing construction project on the campus. To make a long story short, I discovered a major fuel leak on the property. One of the pictures shows two diesel tanks and a trench just below the tanks where a contractor works. I also discovered other minor issues around the work area.

Honestly, I would have overlooked all these issues had I not taken the class. I've included two additional pictures that demonstrate the need for more classroom training to help make us aware of the hidden dangers within and around our office space.

Let Justin and Joel know that their hard work is not in vain!

Thank you all for the opportunity!
